REV. GEORGE ALLEN.

Commonwealth of Massachusetts.

TRUSTEES' REPORT.

To His Excellency the Governor and the Honorable Council of the Commonwealth of Massachusetts.

The Trustees of the Worcester Lunatic Hospital submit their Thirty-Eighth Annual Report.

The reports of the Superintendent and Treasurer of the Hospital, herewith presented, give a full statement of the management of its affairs during the past year. Both reports are highly satisfactory to the Trustees, and sustain their confidence in those who are immediately connected with the daily details of the institution.

Dr. Joseph Draper, Assistant-Physician, having accepted a position in another hospital, resigned his office, to take effect on the first day of July last. On the 30th day of June last the Trustees adopted the following vote:—

"Voted, That we part with Dr. Draper with great regret, and we assure him that his uniform devotion to his duties while in this hospital, and his skill and judicious manner of treating the insane, and of holding intercourse with them, justify our opinion that he is well qualified to take charge of any lunatic hospital."

The vacancy has been acceptably filled by Dr. H. O. Palmer. Time has demonstrated the wisdom and foresight of those pioneers in the cause of humanity, who nearly a half century ago gave their unselfish exertions to endeavors to produce a cor-

rect public sentiment upon the subject of insanity, and labored to procure for those unfortunate persons whose reason was dethroned, the care and attention which recognized insanity as a disease of the brain, subject to medical treatment, and with a reasonable prospect, in a great majority of cases, of being cured, if treated seasonably and skilfully. The following hospital statistics for the year ending September 30, 1870, show among other things the importance of early attention to the disease of insanity:—

					Males.	Females.	Total.

	Number remaining September 30, 1870,	•	35	193	181	409

The percentage of recoveries to the number discharged is forty-one per cent., or about seventy per cent. of those actually discharged from hospital treatment.

The percentage of recoveries to the number of recent cases admitted was nearly eighty per cent.

The percentage of deaths to the whole number was eight and four-tenths.

There exists in the minds of some persons great dread of submitting a friend suffering from this disease to hospital treatment, yet most insane persons can be treated more effectively in a quiet, well regulated hospital than in any other place. A comparison of the percentage of recoveries in new cases treated in the hospital with those which are managed at home will convince the mind of any unprejudiced person. not strange that affection should cling to its object and delay to apply the most effective remedies, but the sad sight meets us at every visitation, of patients now probably incurable, who might have been clothed and in their right minds, if the mistaken kindness of family and friends had not delayed too long to obtain for them the benefit of treatment in some hospital. There have been cases undoubtedly in which persons have been confined in hospitals as insane, when alleged insanity has been a cover for some unworthy object, but such instances, in public hospitals at least, must be exceeding rare. The absence of an adequate motive, on the part of merely salaried officers, to become a party to such iniquity, the monthly and the occasional visits of the trustees, the freedom of access to the friends of the patients, and especially the pure and elevated character which is always sought as an essential prerequisite to the appointment of those in the immediate charge of these institutions ought to satisfy every reasonable person that the chances for wrongful confinement in our hospitals are so remote that there seems to be but slight occasion for any anxiety upon this subject. takes are liable to occur in the best regulated establishments, but the rule of the Worcester Lunatic Hospital is to carefully investigate the cases of the patients, and not to retain a person an hour after the cause of restraint has ceased.

The Trustees take the liberty to suggest whether some change is not needed in regard to the admission of patients both to public and private lunatic hospitals on the simple certificate of two physicians. In this place it is sufficient to allude to this subject without going into an extended discussion of the modifications which the statute may require.

An interesting fact in the histories of this hospital and other hospitals, is the substantial equality in the number of patients of the different sexes. The history of hospitals, and the experience of the world, furnish evidence of the same result. this matter, as in innumerable other instances, we are reminded of the simple statement of the Book of Genesis, "male and female created he them," and we learn that they all tend to demonstrate the wisdom and justice which are involved in the effort to give to each sex equal rights and equal advantages. Having this in view, and being impressed with the idea that it is due to the delicacy of the feminine nature, that the female patients in the hospital should have the benefit of the professional skill and attention of one of their own sex, in accordance with the recommendation of the Superintendent, the Trustees decided to employ a female assistant physician for the female department of the hospital. Miss M. H. Stinson, a regularly educated physician was employed a number of months ago, and has performed her duties to the acceptance of the patients and to the satisfaction of the Trustees.

The experience of those having the management of the hospital, tends more and more to the conclusion that a proper classification of the patients has much to do with success in their management and the hope of their restoration. It is very desirable to give to the patients, as far as possible, the benefit of a kind of family arrangement, and to secure for them the benefit of pleasant and quiet surroundings. proper to say, that the construction of the present buildings is not calculated for convenient classification under the most favorable circumstances, and the remarkable growth of the city as a manufacturing and mechanical community has so far surrounded the present location as to deprive it of the quiet which is so essential in the treatment of the insane. Worcester Lunatic Hospital was erected, every railroad which enters the city has been constructed, every steam-chimney has been erected, and the innumerable car-bells and steam-whistles have here made the day busy and the night hideous by their almost constant exercise. If any one wishes to decide upon

what would be likely to be the effect of this state of things upon the sensitive nerves of an insane patient but recently committed, let him spend one night at the hospital in its present location.

Being fully satisfied that a change was necessary, and that the hospital estate, if prudently managed, may be sold for sufficient substantially to save the Commonwealth from ultimate loss, the Trustees petitioned the legislature for the year 1870 for authority to purchase lands within the city of Worcester for the location of a new hospital. The legislature responded generously to the petition of the Trustees, and authorized them to make the purchase. The Trustees have purchased a beautiful estate, containing about two hundred and seventy acres, for the sum of \$110,950; and they take the liberty to ask the legislature to appropriate the sum of \$30,000, to enable them to complete the payment of the purchase money for the estate and develop the property. They ask further for authority to sell or exchange portions of the estate, for the purpose of straightening the lines of the estate. The estate commences at the causeway at Quinsigamond Lake, bounds upon the east about one-third of a mile by the lake, and upon the south about one mile by Belmont Street, or the old Boston and Worcester turnpike. There are five dwelling-houses upon the estate, in which the family system will be commenced and tested. The estate is beautifully located upon an eminence, with a south and south-easterly exposure. It has an extensive and beautiful prospect, made up of land and water, and diversified by many attractions; a belt of woodland which breaks the force of the cold winds of winter; Bell Pond reservoir so located as to be above the level of the highest buildings which will be erected; the Boston and Albany Railroad passing so near that supplies can readily be furnished, and the whole estate is so located that although it is convenient of access, there is no danger that population or business will be brought so near to the proposed location of the buildings that the quiet of the establishment will be likely to be disturbed thereby. The price of the land seemed to be high, but upon the most careful consideration, the Trustees decided that it would be more prudent to pay the prices established, than to leave the question of compensation to arbitrators; especially when they found that His Excellency the governor, and his council, who visited the

spot at the special request of the Trustees, were unanimously of the opinion that the bargain should be closed; and good judges of real estate in the city of Worcester were of a similar opinion. The Trustees are satisfied that no better or more desirable estate could be procured, and under the care and supervision of our excellent Superintendent and Treasurer, they hope and believe that a plan of a lunatic hospital will be adopted and carried into operation which will combine the wisdom, skill and enlightened humanity which are the development of the last forty years of faithful and earnest attention on the part of those who from time to time have been connected with this institution.

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Lunatic Hospital.

Gentlemen:—In obedience to the laws of the Commonwealth, I have the honor to submit to you the Thirty-Eighth Annual Report of the Worcester Lunatic Hospital.

For the general results of the year, and the condition of the hospital in detail, you are respectfully referred to the following tabular statements, and such brief explanatory remarks as may accompany them.

Table No. 1.
Showing the general results during the year.

					Males.	Females.	Total.
Patients in the Hospital, Oct.	1, 1	1869,	•	•	190	186	376
Admitted during the year,	•		•	•	196	188	384
Whole number under treatmen	nt,	•	•	•	386	374	760
Discharged recovered, .	•		•	•	73	85	158
improved, .	•	•	•	•	68	55	123
not improved,	•	•	•	•	6	-	6
Died,	•	•	•	•	41	23	64
Whole number discharged,	•	•	•	•	188	163	351
Remaining September 30, 187	0,	•	•	•	198	211	409

From this table it appears that three hundred and eightyfour patients were admitted during the year, of whom one hundred and ninety-six were males, and one hundred and eighty-eight were females. At the close of the previous year, there were three hundred and seventy-six patients inmates of the hospital, of whom one hundred and ninety were males, and one hundred and eighty-six were females, so that there were seven hundred and sixty persons under treatment in the course of the year, of whom three hundred and eighty-six were males, and three hundred and seventy-four were females. The daily average number of patients in the hospital was three hundred and ninety-six.

The largest number of inmates during the year was four hundred and twenty-seven and the smallest number was three hundred and seventy-three.

The largest number of males at any one time was two hundred and fifteen and the smallest number was one hundred and eighty-four.

The largest number of females at any one time was two hundred and thirteen and the smallest number was one hundred and eighty-five.

The number of patients discharged was two hundred and eighty-seven; of whom one hundred and fifty-eight were recovered, one hundred and twenty-three were improved, six were not improved, and sixty-four were removed by death.

The average number of residents exceeded that of the previous year by nine, and there were thirty-three more inmates at the close than at the commencement of the year.

The number of admissions exceeded those of the previous year by forty-seven; the number of those discharged was less by nine; and the number of those who died was greater by seventeen than during the previous year.

The ratio of recoveries is a fraction more than forty-five per cent. to the number of those discharged; or a fraction more than fifty-five per cent. after deducting the number of those who died.

At the close of the year there were nine patients in the hospital who had recovered their usual degree of mental and physical health, and were awaiting the convenience of friends for their removal. If this number were added to the number of those discharged and tabulated, the ratio of recoveries to the number discharged, after deducting the number of those who died, will be increased from fifty-five per cent. to a fraction

more than fifty-eight per cent. And if eleven cases of recurrent mania be included in the tabular statement the per cent. of recoveries to the number of discharged will be increased from fifty-eight to sixty-one per cent.

Again, if seventy-nine patients who were transferred directly to other institutions be deducted from the whole number discharged the ratio of recoveries to the number discharged will be very nearly seventy-six per cent., or eighty per cent. if the patients who had recovered and were remaining in the hospital, be added to the number of those discharged.

Of those discharged improved, seven had so far regained their habits of self-control as to be able to return cheerfully and hopefully to their homes and resume their ordinary occupations with profit to themselves and their families.

Of those discharged not improved, four were confirmed epileptics, two were cases of chronic disease, long past all hope of improvement, and were hopelessly demented.

The rate of mortality was somewhat greater than during the previous year, but may be considered as quite moderate, if we regard the condition of many of the patients when admitted.

The percentage of deaths of the average number of residents was sixteen; but only eight and four-tenths per cent. if calculated on the whole number under treatment.

The proper tables of mortality will show that a large proportion of the deaths occurred to old and feeble persons who had long been afflicted with various forms of physical and mental disease and to whom death could be considered in no other light but that of a happy release.

The preceding table shows that two hundred and forty-eight patients were admitted to the hospital in the course of the year, whose insanity had existed one year or less previous to the date of their admission. Of this number ninety-two have actually recovered their usual health and strength of mind, and have been discharged from the hospital and returned to their homes. Ninety others have been discharged in the various stages of improvement. Forty-three others who remain are improving in such a manner as to give great promise of ultimate recovery.

Other tables in this Report show that more than seventy-five per cent. of all patients admitted to the hospital who had been insane not more than one year previous to admission, have recovered their mental health and usefulness, and have been restored to their families and friends.

It would not be difficult to show that more than ninety per cent. of uncomplicated cases of mental disease are susceptible of recovery if placed under hospital treatment in the earlier stages of disease. And it may be shown also that a large proportion of those who are placed under treatment on the first appearance of disease recover their customary health within a period of six months. It may not be too much to hope that in the future we shall be able to reduce the period necessary for recovery to three months in all ordinary cases of mental disease.

This table also shows that two hundred and seventy-two patients were committed by order of the judges of the probate courts of the several counties, thus making their admission to the hospital an open, fair, legal proceeding of which none can complain. seems to be, however, a measure of doubtful propriety to wait for the action of the probate court in all, or in a majority, of cases, before gaining an admission to the necessary and proper restraints of the institution. One hundred and ten patients were admitted without the intervention of the courts. seven of these were placed in the hospital by the overseers of the poor of the towns in which they had settlements; and eighty-three were placed under treatment by their immediate friends, or voluntarily sought admission by themselves. cases the certificates of two physicians, given under oath, have accompanied the admission of the patients. One patient has been placed under treatment in the hospital by order of the judge of the superior court, and one by order of the board of state charities.

Of the three hundred and eighty-four patients admitted in the course of the year, two hundred and seventy-eight had been inmates of some hospital for the insane. Eighty-five had, at some previous time, been inmates of this hospital. Fifteen had been inmates of other hospitals in this State, and six were known to have been inmates of hospitals in other States or countries.

Of the three hundred and eighty-four patients admitted in the course of the year, one hundred and thirty-eight were supported by the charity of the Commonwealth, one hundred were supported by towns and cities, and one hundred and forty-six by individuals.

Of the four hundred and nine patients remaining in the hospital September 30, 1870, thirty-five are supported by the Commonwealth, one hundred and ninety-three by towns and cities, and one hundred and eighty-one by individuals. Of the one hundred and eighty-one patients supported by individuals, only six were non-residents of the State at the time of admission, and all but two of these were former residents of the State, and at the time of becoming insane were only temporarily absent from their homes in this Commonwealth.

The number of patients admitted to the hospital since its opening in January, 1833, amounts to eight thousand nine hundred and nineteen, of whom four thousand four hundred and sixty-two have been males, and four thousand four hundred and fifty-seven have been females.

Of this number four thousand one hundred and thirty-six have been restored to health of body and mind, and discharged as recovered, one thousand eight hundred and seventy-eight have been discharged improved; the recoveries being in the ratio of forty-eight and five-tenths per cent. to the whole number. After deducting the number of those who remain under treatment, the ratio of those discharged improved is a fraction more than twenty-one per cent. to the whole number, after deducting the number of those who remain in the hospital.

The board of state charities have removed to other institutions, and to their homes in other States, eighty-three State patients in the course of the year. This number were all carefully examined by the agent of the board previous to removal, and it is believed that none were removed whose mental and physical condition did not warrant such a change.

But one really feeble patient, and no unusually violent, filthy or destructive person has been removed. I am informed that the feeble one who had quite recovered from mental disease has improved in physical health since her removal. In all cases where patients supported by the State have been removed to other institutions, or to their homes or friends, previous to recovery, their cases have been fully investigated, and their wishes consulted as far as possible; and when relatives and friends have been known, they have been fully informed of every change made in regard to the patients in whom they were personally interested.

Seventeen State patients have died in the course of the year, and a larger number than usual were removed by the board of state charities; a work rendered necessary by the largely increased number of admissions to the hospital during the year.

The Steward has paid to patients of all classes more than three hundred dollars for work done, in the hope of inducing thereby greater habits of industry among the inmates, many of whom are able to perform considerable labor, and also as a fair compensation for labor actually performed. For a few, places have been obtained in the neighborhood, where the patients could labor and receive wages. Several persons of both sexes have in this way earned considerable sums of money. Some male patients earned as much as fifteen dollars per week during the whole summer. Others earned smaller sums, varying from thirty to fifty dollars each.

Although the results of the year were in general satisfactory, they would have been more gratifying but for the removal of a number of patients before their entire recovery, or before sufficient time had been given for a fair trial of remedial treatment. Some who did not, would undoubtedly have recovered, if their friends had been aware of the chronic character of their malady, and of the importance not only of prompt treatment, but also of a steady persistence in the use of such means as were adopted for their relief after they had been placed in the care of the hospital.

Table No. 4 shows that fifty-seven per cent. of all the admissions are of a class usually denominated chronic, and are made up largely of epileptics, paralytics and those suffering under the various grades of dementia. While many of these may be expected to improve, none of them can ever be discharged as recovered. Thus the number of recoveries must be drawn from the forty-three per cent. of cases suffering from the more acute forms of mental disease.

The large proportion of patients admitted from year to year suffering from insanity of an incurable character, must remain and accumulate, and eventually call for largely increased accommodations. If only curable patients were admitted, the discharge by recovery, and by death, would very nearly balance the number of admissions, and so leave only a small margin of incurables at the end of each year.

If only curable patients, not in an exhausted condition, and whose insanity was not complicated with any organic disease, were admitted into the hospital, the recoveries should reach from eighty to ninety per cent. of the whole number of admissions; and about five per cent. would probably sink under the force of disease while undergoing treatment; so that only about five per cent. would remain a burthen to the community from their insanity becoming chronic and permanent.

From various causes, it is, however, found that in this and in almost all lunatic hospitals in the country, the proportion of incurable patients suffering from the various forms of mental disease greatly exceeds the curable. The ratio varies considerably, and the incurable must necessarily predominate in those districts distant from the hospitals where, from ignorance of the real character of hospitals, and the condition of their inmates, the friends of the insane neglect to provide for them the means of relief which might be obtained. Another reason for this state of things is found in the fact that the hospitals and asylums are already crowded to the utmost limits of their capacity. Another reason is the neglect of the State, hitherto, to provide such accommodations, and such means for relief, as are demanded by the choice of a large and respectable portion of the community. For these and similar reasons admission to a hospital is not obtained for a large class of cases, while they are recent, acute and curable, and only after they have become incurable and the friends have become weary of the burden of supporting them, or they have become troublesome and dangerous, is admission sought and sometimes with difficulty obtained.

It has always appeared to your Superintendent that while every possible facility should be afforded for the care and restoration of the recent and curable, that no means should be spared for the comfort and amelioration of the chronic and incurable. The incurable, so-called, sent to your hospital, in every particular, require as much care, the same treatment and supervision as those who are curable, and generally they do so for much longer periods of time before the violence of attack yields to the remedial and moral influences of the treatment adopted for its relief.

These incurable patients are as dangerous in their impulses, and require the same protection for their safety as the more hopeful cases do. They are as dangerous towards the community at large, and to those attending upon them during the periods of their excitement. Their passions are as wild and ungovernable; their despondency and gloom as deep and dark, and the perversion of their thoughts, feeling and actions is as complete as in those whom we regard susceptible of restoration to a sound state of mind. In fact some of the most dangerous forms of insanity are those generally regarded as entirely incurable. To these forms belong the epileptics, who suffer from paroxysms of blind and furious mania at variable and uncer-In the same rank may be placed some of those tain periods. who suffer from general paralysis, who, during their attack of recurrent mania of an exalted and ambitious nature, are frequently dangerous to themselves and others. And in almost all other forms of chronic insanity there are periods of exacerbation of a more or less violent and persistent character, which occur from time to time, and require for their reduction, and for the safety of the patient himself and the protection of others, that all the resources of a well-ordered hospital or asylum should be applied as fully, promptly and persistently as in the case of acute and curable patients.

Now it happens here, as elsewhere, that a majority of the patients placed under control and protection are the subjects of chronic mental derangement. Those who were responsible for the care of these persons, succeeded in retaining them in their

homes or in almshouses, during the earlier periods of their disease; but from some new source of danger of an unusual character making its appearance, or from the great degeneration of body and mind, and the perversion of all natural habits of both, which often follow in the course of mental unsoundness, they have at length been compelled to relinquish their charge and consign their friends to the hospital for care and protection, after all hope of restoration has departed.

Would not this class of patients be much more economically relieved and cared for by being placed at first in the hospital, whereby their recovery would have been promoted and the persons restored to society, competent to fill their stations in life after a much less prolonged course of treatment?

						1		

In Table No. 5 are given the assigned causes of the mental disease of the patients admitted during the year. Physical causes were supposed to have been concerned in producing the mental disturbance for which admission to the hospital was sought in three hundred and twelve cases, or about eighty per cent. of the admissions. Moral influences were recorded as the active agents in fifty-nine cases, or about fifteen per cent. of the admissions.

The prominent physical causes were intemperance; diseases affecting the brain and nervous centres, including those suffering from paralysis and epilepsy; the puerperal state and its consequences; the tendency to a recurrence of insanity derived from previous attacks; various deviations from the normal standard of health, as masturbation; the decay and degeneration which occur in persons at advanced periods of life; the mental prostration and delirium passing into insanity which follow various forms of disease, attended with changes in the quality of the blood; and the abnormal tendencies and defects observed in the organs of those born imbecile.

The chief moral causes are supposed to have been grief, anxiety, reverses of fortune, domestic and pecuniary difficulties, disappointment, and badly regulated and dissolute modes of life.

There died during the year sixty-four patients, of whom forty-one were males and twenty-three were females. The rate of mortality on the average number of residents was sixteen per cent. The mortality calculated on the whole population of the hospital was eight and four-tenths per cent. During several years past the death-rate has been considerably increased among the male inmates of the hospital. In thirteen cases seven males and five females, the age at the time of death was over sixty years. In seven it varied from sixty-five to seventy years. In three from seventy to eighty years, and two males were each more than eighty years of age.

In thirty-one cases which proved fatal, namely, twenty-two males and nine females, cerebral disease, paralysis or epilepsy was present, and with various secondary complications contributed to this result.

The large preponderance of males involved in these sections of the table of mortality abundantly accounts for the varying ratio of mortality in the two sexes which have been alluded to. The deaths from the several forms of cerebral disease reached nearly fifty per cent. of the whole mortality of the year.

In hospitals for the insane, it is always to be anticipated that a large proportion of the yearly mortality will, in the absence of any epidemic or special disease, be attributable to diseases affecting the brain and nervous centres.

In eight cases, five males and three females, death resulted from exhaustion consequent on high maniacal excitement.

In ten cases, six males and four females, death resulted from diseases affecting the lungs and heart; and nine persons, four males and five females, died apparently from the gradual decay and wearing out of the system consequent on old age.

The health of the patients at the time of their admission was almost invariably in a very unsatisfactory state. Only a small number could have been tabulated as possessing good bodily health and condition. In a large proportion of the patients, their health was indifferent and their bodily condition reduced, and in many their health was bad and their condition so prostrate that considerable danger to life was apprehended.

Various functional derangements of organs were present in a large number of the second class, a state of debility or anæmia was frequently observed, and in chronic forms of disease, implicating the organs of the chest and abdomen, as well as those more intimately connected with the operations of the mind. Many of these were incurable in their nature, but had not yet reached that stage which would immediately compromise the life of the patients. Of this character were many cases of epilepsy, paralysis, diseases of the lungs and liver, which would only admit, at first, of a period of relief, and ultimately pass into a more dangerous and fatal stage.

The third class included only three cases which from various causes could be considered as immediately dangerous to life. In many of them the time for treatment had long passed before they were sent to the hospital, and upon admission they were found to be sinking from disease, or from exhaustion consequent upon the unchecked violence of their mental disturbance. In many, bodily disease of a grave type was combined with mental disease of an acute character, which had rendered their removal to the hospital indispensable.

Throwing out of the calculation the patients resident in the hospital, who are known to be suffering from various forms of disease, and who are generally numerous enough to fill both sick wards to their full extent, it is satisfactory to be able to state that the general health of a majority of the patients was good throughout the year, and that no epidemic or other troublesome disease prevailed during the year.

This was more remarkably so in the female side of the hospital. At different seasons there were the usual affections observed in the ordinary community outside of the hospital, as bronchitic attacks, catarrhs, affections of the throat and slight diarrhea.

In the male side of the hospital, occasionally, patients sinking under disease were, just before death, attacked with diarrhea in a more marked and severe manner than among the females, and pulmonary congestions were also more frequently observed in the last stages of life in the male sex.

The medical and moral treatment of the patients has been conducted on the same great principles as have been hitherto in use and described in former reports. Such changes and deviations as time and experience have shown to be desirable and necessary have been adopted.

In my annual report for the year ending September 30, 1867, I recommended the employment of a thoroughly educated, refined Christian woman, as an assistant-physician, on the female side of the house, in the hope of supplying a want long felt and often timidly expressed. In July, 1869, Mary H. Stinson, M.D., was invited to visit the hospital and remain, with a view of testing the propriety of appointing her assistant-physician in the female department of the hospital.

Thus began the experiment of employing female physicians in public hospitals. Dr. Stinson's success has been such as to warrant the employment of female physicians in the female wards of the lunatic hospitals, and I believe the continued success of the plan thus adopted will be the means of introducing an important aid to the treatment of the mental maladies of females.

The employment of the patients continues to be maintained with as much vigor as possible. Although no tabulated statement of the amount of work done during the year can be made in this Report, as much has been accomplished as in any previous year. The men are as usual employed out of doors on the farm and in the gardens, or in-doors in the laundry, bakery, kitchens, and other work-rooms, where the heavier work of the establishment is performed. Considerable work is also done by the patients in the carpenter's shop, the mattress shop and the blacksmith shop.

The women are employed in the greatest number at needlework, but many of them assist in the laundry, kitchen and wards of the hospital. More than sixty per cent. of the women are actually employed in some useful labor.

The quantity of land available for the requirements of the hospital, and the profitable employment of the patients, has long been too limited. The purchase of land for the purpose of rebuilding will add to our means of usefulness in respect to the employment of male patients, and not only be of advantage as a direct curative agent, but it is hoped that it will tend to keep down, if not lessen, the average weekly cost of all the patients maintained here.

In a neighborhood so largely agricultural, there is certainly no other employment to be compared in efficacy with that which can be carried on in connection with a farm.

It is satisfactory to be able to report that the average weekly cost per patient has been reduced from four dollars and two cents to three dollars and sixty-eight cents, and that there remains in the treasury a very fair cash balance in favor of the hospital.

I ought to allude to the fact that patients are often brought to the hospital in mechanical restraint, or by false pretences. Many placed in the hospital during the year had on hand-cuffs when they arrived; some were secured by ropes, and very many were entirely deceived in regard to their admission to the institution.

It is not easy to estimate the wrong done to patients who are taken from their homes and placed in a hospital by brute force or by misrepresentation. It destroys their confidence in the medical officers and their friends; it weakens all the efforts made for their recovery or even for their comfort. There are patients now in the hospital who have been inmates for years, and who persistently refuse every kindness, neglect all advice, repudiate every attempt to gain their confidence because they were deceived, or were entrapped, and they regard the officers of the hospital as parties to the plot to deprive them unjustly of their liberties.

I think there has been for some years past a decided increase of severe physical disease of a chronic nature attending the mental derangement of the patients admitted to the hospital, and many cases of this character are now running their slow but sure course.

There is, however, among the patients at large a great amount of active life, and matters of general interest are pursued with pleasure and profit. Though subject to many interruptions from varying moods, a large amount of intellectual enjoyment marks the daily life of a lunatic hospital. Some of the patients devote themselves especially to certain branches of study or investigation. For instance, the study of music has been followed with some success. Natural history and botany have been taken up for a time with much enthusiasm. A large number of select weekly and monthly periodicals, beside the daily papers, is supplied by the institution, and books of a solid character are from time to time added to the libraries. Several of

the city libraries also contribute to the literary employment of patients.

Other patients, like the generality of persons whose minds have acquired no decided bent, range without much selection over the lighter works and periodicals at their disposal.

Out of door life has been encouraged in all, by the practice of taking long rides and rambles in the country, and much delight and freshness of feeling, with intellectual reinforcement has been thus acquired. The winter evenings have been enlivened by social parties, lectures, concerts, and entertainments of different kinds. Music, perhaps, takes the highest rank in these amusements, in its power to please the greatest number of patients. We have to thank various friends of the institution for their estimable contributions to our winter evening entertainments. They have assisted us out of good will and sympathy, with that which money could not purchase. I take this occasion to thank them, one and all, for their great kindness in this respect.

The ordinary methods of removing dulness by excursions, sight-seeing, attending lectures in the city, and meetings of a benevolent or religious character, with absences of a longer duration, in many instances, have been freely used.

It gives me satisfaction to acknowledge in behalf of the patients, special acts of kindness from Miss Dix, Dr. Hooper, Wm. Knowlton, Esq., and Hon. Henry Chapin and others. In the consciousness of pleasure bestowed and sorrow lightened be their reward.

Since my last report Dr. Draper has accepted the position of assistant-physician to the female department of the New Jersey State Lunatic Asylum at Trenton, and Dr. H. O. Palmer has very acceptably filled the office of assistant-physician to the male department of this hospital since Dr. Draper's resignation.

The staff of officers has in other respects remained unchanged during the year, and each in their several departments have actively contributed to the success and good working of the institution for which my acknowledgment of such faithful service should now be made to you.

There have been several changes, however, among the attendants and supervisors, both male and female. In the case of supervisors of both sexes, some have left to settle more permanently

in life. Attendants have left because the change in supervisors has given them an opportunity to change more readily than otherwise would have been offered. The whole body, however, of employees have with few exceptions, and those not of a grave nature, conducted themselves in a highly satisfactory manner, and have earned my good opinion from the earnestness with which they have devoted themselves to their duties, and for the uniformly good treatment and management of those directly under their care and control.

On the evening of every day, and on the afternoon of Sundays, religious services have been held in the chapel by the Rev. George Allen, who for more than twenty years has so faithfully performed the duties of chaplain. Two afternoons of each week have also been spent by him in visiting the wards of the hospital and conversing with such patients as desired religious instruction and comfort.

For whatever of success may have attended our labors, I am largely indebted to the kind, faithful and intelligent coöperation of my assistants and associates in office. And it gives me great satisfaction to recognize in this public manner the value of the faithful and self-denying services of many of those who fill subordinate places of trust and responsibility. In no walk of life is a true Christian spirit of forbearance more called for than in the position of an attendant in a hospital for the insane; exposed to constant taunts, to irritation, and even to personal abuse, they must never retaliate. On them in a great measure, depends the successful treatment of the patients. While preserving strict discipline, and checking every wayward act, they must also encourage the timid, cheer the sorrowful, and forgive and forget all irritability and petulance. The manner in which attendants in this hospital have discharged their trying duties during the past year shows they have generally borne this in mind, and that they have been actuated in the care of their unfortunate charge by a higher motive than that of mere pecuniary remuneration.

It will not, I trust, be considered beyond my province to take this opportunity of recording the loss which this hospital has sustained in the death of one who was its warm, faithful friend, wise counsellor and devoted trustee, Hon. Charles Mattoon. His peculiar business aptitude, punctuality and clearness of comprehension, and mastery of all the details of the institution, rendered him a valuable and trustworthy adviser. All resident in the hospital felt that they had lost a kind, faithful, sympathizing friend when he passed away.

With the support of your generous sympathy, and prudent counsel in every emergency, which I have so long, and so uniformly enjoyed, I look forward with hope, confident of success, in our difficult and responsible labors.

MERRICK BEMIS.

Worcester Lunatic Hospital, Worcester, Mass, October 1, 1870.

APPENDIX.

FORMS CONCERNING ADMISSION TO THE HOSPITAL.

PETITION.

[The applicant must answer in writing the printed interrogations accompanying this blank.]

To the Honorable the Judge of the Probate Court, in and for the County of :

of on oath complains that of , in said county of , is an insane person, and a proper subject for the treatment and custody of the Worcester Lunatic Hospital.

Wherefore, he prays that said may be committed to the said Worcester Lunatic Hospital according to law.

, ss.

A. D. 187.

Then the above named the above complaint, by h subscribed, is true.

made oath that

Before me, subscribed, is true.

Before me,

, Justice of the Peace.

I, the subscriber, one of the selectmen of where said resides, hereby acknowledge that notice has been given to me of the intention to present the foregoing complaint and application.

A. D. 187.

To the Honorable the Judge of the Probate Court, in and for the County of :

The subscriber, having made application to your Honor for the commitment of to the Worcester Lunatic Hospital, as a lunatic, now presents the following statement, in answer to interrogatories:—

What is the age of the lunatic? Ans.

Birthplace? Ans.

Civil condition of lunatic? Ans.

Occupation? Ans.

Supposed cause of disease? Ans.

Duration? Ans.

Character—whether mild, violent or dangerous? Ans.

Homicidal or suicidal? Ans.

Paralytic or epileptic? Ans.

Previous existence of insanity in the lunatic? Ans.

Previous or present insanity in any of the family? Ans.

Habits in regard to temperance? Ans.

Whether he has been in any lunatic hospital; if so, what one, when, and how long? Ans.

(If a woman.) Has she ever borne any children? Ans.

(If a woman.) How long since the birth of her last child? Ans.

Name and post-office address of some of the nearest relatives or friends?

What facts show whether he has or has not a settlement, and where, if anywhere, in this State? Ans.

[For the law relating to settlement, see Gen. Stat., chap. 69.]

, Applicant.

PHYSICIANS' CERTIFICATE.

The subscribers, respectable physicians of in the county of , having made due inquiry and personal examination of named in the foregoing application, within one week prior to the date hereof, certify that the said is insane, and a proper subject for the treatment and custody of the Worcester Lunatic Hospital.

A. D. 187.

, SS.

A. D. 187.

Then the above named oath that the above certificate is true.

made

Justice of the Peace.

Commonwealth of Massachusetts.

, ss. At

, in said county, on the

day of

, A. D. 187 .

On the application of for the commitment of in said county, to the Worcester ; notice in writing having been Lunatic Hospital, given by said applicant to one of the selectmen of where said resides, of h intention to make said application, and said having been duly notified of the time and place appointed for hearing, it appears, upon a full hearing, is an insane person, and a proper subject for that said the treatment and custody of the Worcester Lunatic Hospital.

Wherefore it is ordered that said to the said Worcester Lunatic Hospital.

be committed

, Judge of Probate Court.

FORM OF OVERSEERS' BOND.

Worcester Lunatic Hospital.

, in the county of of Whereas, , has been admitted a boarder in the Worcester Lunatic , a majority Hospital, of the Overseers of the Poor of the town of , in the county of , in behalf of the inhabitants of said town, do hereby promise , Treasurer of said Hospital, to pay him, or his successor in said office, the rate of board which may, from time to time, be determined by the Trustees of said hospital, for said patient, so long as h shall continue a boarder in said hospital, with such extra charges as may be occasioned by h requiring more than ordinary care and attention, suitable clothing, and to pay for all such necessary articles to provide for h of clothing as shall be procured for h by the Steward of the hospital, and to remove h from said hospital whenever the room occupied by h shall be required for a class of patients having preference by law, or in the opinion of the Superintendent, to be received into said hospital: Also to pay not exceeding fifty dollars for all damages he may do to the furniture and other property of said hospital, and for reasonable charges in case of elopement, and funeral charges in case of death. Payment to be made quarterly, and at the time of removal, with interest on each bill from and after the time it becomes due.

Witness our hands this day of Attest: (Signed,)

 $\left\{ \begin{array}{l} \textit{Overseers of the Poor} \\ \textit{of the} \\ \textit{Town of} \end{array} \right.$

[Oct.

FORM OF PRIVATE BOND.

Worcester Lunatic Hospital.

Whereas, of , in the county of

, as principal, and

, in the county of of , as surety, do hereby , Treasurer of jointly and severally promise said hospital, to pay him or his successor in said office, the rate of board which may, from time to time, be determined by the Trustees of said hospital, for said patient, so long as he shall continue a boarder in said hospital, with such extra charges as may be occasioned by h requiring more than ordinary care and attention; to provide for h suitable clothing, and to pay for all such necessary articles of clothing as shall be procured for h by the Steward of the hospital, and to remove h from said hospital whenever the room occupied by h shall be required for a class of patients having preference by law, or in the opinion of the Superintendent, to be received into said hospital. Also to pay not exceeding fifty dollars, for all damages he may do the furniture and other property of said hospital, and for reasonable charges in case of elopement, and funeral charges in case of death. Payment to be made quarterly, and at the time of removal, with interest on each bill from and after the time it becomes due.

Witness our hands this

day of

A. D. 187 .

Principal.

Surety.

Patients will be received into the hospital at any time, if the following conditions are complied with:

If the patient is in indigent circumstances, and has no settlement in any town in the Commonwealth, the Probate Court, or, if in the city of Boston the Superior Court, will issue a warrant for the commitment of the patient to the hospital. The State will then pay the cost of support, and the county from which the patient is sent will pay the expenses of the commitment.

If the patient is in indigent circumstances, and has a settlement in any town in the Commonwealth, the Overseers of the Poor of that town may give a bond for the support of the patient. Or, when this is inconvenient, an application may be made to the Probate Court of the county where the patient resides, and a warrant will be issued for the commitment of the patient to the hospital, and the town will be held responsible for the support of the patient.

In all other cases, a bond from responsible persons, as principal and surety, will be required for the expenses of the patient while in the hospital.

In all cases, before admission to the hospital, two physicians, one of whom shall be the family physician, must certify that the patient is insane.

All necessary clothing must be supplied by the friends of the patients.

Clothing will be supplied at the hospital, if desirable, and charged in the bills of cost.

Damages done to the furniture and other property to the amount of fifty dollars may also be charged.

Reasonable charges will be made in case of elopement, and funeral charge in case of death.

All bills are collected by the Treasurer quarterly, or interest charged on the same after becoming due.

Bills become due on the first of January, April, July and October, and when the patient leaves the hospital.

METEOROLOGICAL OBSERVATIONS

MADE AT

THE STATE LUNATIC HOSPITAL, WORCESTER, MASS., 1869-70.

Latitude, 42° 16′ 17″ N.; Longitude 71° 48′ 13″ W. Elevation, 528 feet.

EXPLANATION.—The force of the wind is estimated upon a scale of 10, and indicated by figure affixed to the letters denoting the direction. When no number is affixed, 1 is meant.

APPENDIX TO SUPERINTENDENT'S REPORT.

The Superintendent's report for the year ending September 30, 1865, contained suggestions and recommendations which were en dorsed by the Trustees in their report for the same year in the following words:—

"Another want sadly felt is some intermediate temporary residence for patients not fit for discharge, nor proper subjects for an insane ward: a place where can be tested their ability to live free from the actual restraints of the hospital before going to their homes and into the busy world. As was said in our last report, some of our patients are occupied in various employments in the town who return to the shelter of the hospital at night, not having confidence in their ability to leave its protecting influence altogether.

"It is believed that many might be discharged without fear of relapse, if some such intermediate step as this could be taken, instead of ushering them at once into active life.

"One or two cottages in the vicinity of the hospital, occupied by discreet persons now employed there, making a little family circle by the addition of a few selected patients, would be of great benefit to the hospital, in relieving its crowded wards, and to the patients in giving them a chance to show that they can live without restraint. Many persons when admitted as patients might with advantage be placed in these cottages.

"Some suggestion will be offered at a future time for a plan by which these improvements can be made without involving much expense.

"While no wasteful experiments should be encouraged, the intelligent Commonwealth of Massachusetts ought to require that not only every improvement of the age should be introduced into its system for the treatment of the insane, but that the State should lead in this branch of progress as it has in so many others."

The same suggestions were pressed in 1866, '67 and '68, and in 1869 they were again presented with a more complete plan for carrying out the wishes of the Trustees, and a more definite statement of their views in regard to the management of the insane. The result of all this was an attempt in the spring of 1869 to bond the right of purchase of certain lands in the easterly part of Worcester

bordering upon Lake Quinsigamond, owned by Charles Bowen, Mrs. Lucy A. Watson, Henry Prentice, and Robert Taft. After considerable time had been spent the effort was abandoned, and the right to purchase certain lands in the north-easterly part of the city was bonded of Walter Bigelow, Timothy Bancroft and others.

On the 30th of September, 1869, the Trustees—

Voted, That it was expedient to erect new hospital buildings on the land for which Dr. Bemis has procured bonds; and also,

Voted, That Dr. Bemis be authorized to secure by bonds a right to purchase such adjacent lands as he thinks expedient; also,

Voted, That Hon. Samuel E. Sewall be directed to prepare a petition to the legislature for leave to purchase land and erect a new hospital, said petition to be presented and examined at the next meeting of the Board.

In the meantime many of those who were interested in the project had visited the proposed site and expressed themselves strongly in favor of the first named location, the effort to bond which was now renewed and carried to a successful termination.

The legislature, in answer to the prayer of the Trustees' petition, granted, in the form of a loan to be paid for from the proceeds of the sale of the lands now occupied by the hospital within the limits of the city, one hundred thousand dollars, to be applied to the purchase of the new site. About three hundred and seventy-five acres of land have been purchased of Henry Prentice, Lucy Ann Watson, Robert Taft and Charles Bowen, at a cost of about one hundred and ten thousand dollars. It is desirable to purchase, for the purpose of straightening lines and rendering the estate more compact, several small lots numbered 1, 2, 3, 4, 5, on the plan. Nos. 1 and 2 are very small lots, and there is upon each a small house. That upon No. 1 is entirely worthless, except to the present occupant. No. 3 is the most valuable lot and contains about eight acres. Its purchase is important as, in its present condition, it makes an awkward projection of another man's estate into and near the middle of the north side of the hospital estate. No. 5 is important only as straightening the boundary line. No. 4 contains about fourteen acres, and is important both from its position as straightening the boundary line, and also as containing valuable springs.

For similar reasons it will be desirable to dispose of the lot marked (B) in the plan. This lot is now covered with wood, which may be cleared off and then the land disposed of, thus realizing a sum, sufficient perhaps to pay for the lots which we desire to purchase. The lot marked (A), containing about three and a half acres,

may very properly be offered for sale in the future as not being necessary to the hospital, after the estate has become somewhat developed. This lot, however, should not be disposed of until the hospital has secured its approaches both from the city and from the railroad, which passes very near to this point. [See plan of lands, p. 100.]

This estate is situated in the easterly part of the city, near the Boston and Albany Railroad, about one mile from the present hospital buildings, and about the same distance from the Central Railroad Station. The old Worcester turnpike forms the southern boundary line of all the estate except the lot marked (A) on the plan. Lake Quinsigamond is on the eastern border, and Mill Stone Hill, so called, divides and separates the western border from the city. It is crossed but by one thoroughfare, a town road, known as Love Lane.

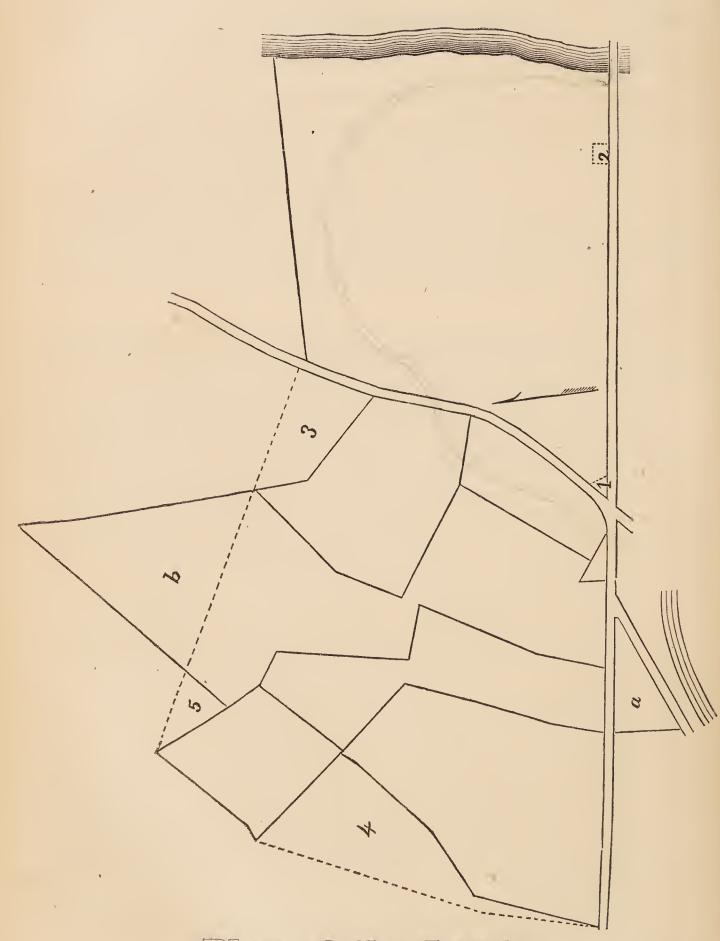

The estate has generally an eastern and south-eastern slope, though a portion of it has a full southern slope. It is well sheltered, warm, and vegetation starts upon it early in the spring.

The eastern and western borders are very finely skirted with wood. The soil is, much of it, a gravelly loam, though the highest land upon the estate is clay. The rocky ledge of Mill Stone Hill breaks out on the western border where it is covered with a fine growth of wood. The rock does not extend sufficiently far into the estate to interfere with any development necessary for hospital purposes. Nor does it extend far enough to make any additional drainage necessary for hygienic reasons.

On the estate there are five good, substantial dwelling-houses, surrounded with gardens and orchards, such as are found on well-to-do country farms. These will in the spring be occupied by thirty or forty patients and their attendants. Although built without any reference to such uses, they will be occupied without alteration or special preparation for at least one year, in order to test the question whether, on an estate set apart for the purpose, with skilful attendants, under proper medical and supervisory care, a fair proportion of insane persons such as are ordinarily found in lunatic hospitals, cannot be better cared for than in any at present existing accommodations.

The failures and successes, the disappointments and difficulties of this plan, will be fully and honestly presented in my next annual report.

If the plan meets with any success, I shall also present a topographical map of the estate, with plans for such new structures as seem to me to be desirable for the proper accommodation, care and restoration of the insane.

Plan of the Lands.

The prominent features of the plan have been very briefly mentioned in several of my annual reports, and may be here anticipated by repeating a few general statements made in my report of last year.

For the best management and control of persons afflicted with mental aberration to that degree which requires interference and restraint, it is necessary that places be provided where they can be kept quite separate from relatives and friends and all those persons whom in health they have been in the habit of commanding or controlling; and where they will be removed from all objects likely to produce the same class of mental operations which accompanied the invasion of the disease.

The first consideration of importance is the proper location of the buildings. The site should be elevated, and if possible on a sunny slope, and by no means in a cold or exposed situation. The soil should be gravel, and there should be such a supply of pure water as to make the quantity used daily of no importance. The estate should be near but not immediately adjoining a large town, having abundant railroad facilities, and should be thoroughly enclosed by a high and substantial wall and furnished with a gate-keeper's lodge at the entrance. The surface of the land should be uneven and broken by groves and scattering trees of natural growth. The quality of the soil is of but little consequence in comparison to the quantity. But a heavy clay sub-soil should be avoided.

The buildings should be mainly of two stories and should be constructed in the most substantial manner of brick or stone and made as cheerful and pleasing in their aspect as a due regard to a wise economy will permit.

They should consist of, first, a hospital proper containing every facility in its construction for classification, seclusion and treatment which ingenuity can devise or skill create. This will be best obtained by the erection of separate blocks or wings at some little distance from each other, connected by light, airy passages or corridors, under which shall be a continuous basement. Each block or wing shall contain within itself every comfort and every facility for the care of its patients and shall be to all intents and purposes a separate and detached hospital. In the lower story there should be the dining-rooms, sculleries, lavatories, water-closets, sitting-rooms, billiard-rooms, reading-rooms and an occasional room for temporary seclusion of excited patients. The lower story should be connected with the upper story by a wide, light and easy stairway, and this story should contain the sleeping apartments, bathing-rooms,

water-closets, wardrobe and dressing-rooms, and rooms for seclusion, when necessary, and also semi-secluded rooms for the sick, and proper chambers and offices for the nurses.

The rooms should all be lighted by large and pleasant windows, commanding the most pleasing views the situation will permit. The rooms on the lower floor should be large, cheerful and airy, well warmed at all times and thoroughly ventilated. The rooms of the upper story should be of convenient size and have every comfort and convenience of sleeping-rooms and sick-rooms. The bathing-rooms, water-closets and lavatories should be large, light, airy and of materials which do not absorb moisture. Each room should be thoroughly ventilated by separate flues carried to the main ventilating shaft or duct. The kitchen and domestic offices should be at or near and in the rear of the centre of this proposed group of separate and detached wings or blocks. The public offices, medical offices and business offices should be at or near and in front of the centre.

The corridor basement should connect each wing or block as well as the corridor above with the central offices and with each other, and in this basement will be placed facilities for conveying all supplies from the kitchen and stores to the wings or blocks.

The males should occupy apartments on one side of the central offices and the females on the other, and all the accommodations should be separate and distinct from each other.

This centre group of blocks or wings should be of sufficient capacity to accommodate in the best possible manner about one-third of the whole number of patients destined to be managed and controlled in the whole establishment. The remaining two-thirds should be accommodated in structures of a different character, but should be subject to the same management and control.

So far as the hospital proper is concerned, the objects sought are, a more perfect and complete ventilation, so that the atmosphere of one ward should not diffuse itself through any other ward, but should escape at once into the open air, while its place is supplied as speedily by the purest air obtainable from the common supply of the whole atmosphere outside; a more complete separation of those cases requiring special treatment and needing rest and seclusion; and a more sunny and cheerful aspect to the various wards; and less interference and discomfort from the general conduct of a large hospital.

The question of the plan would simply be, first, What is the structure most conducive to health? second, What is the most convenient and economical? That is, How can we best secure perfect ventila-

tion, plenty of sunlight on all sides, pleasing views from all lookouts, and easy and convenient means of communication?

In order to realize all these advantages the wings or blocks may be arranged in any way in reference to each other, but it will generally be found best if placed in a line or side by side, thus diminishing the distance to be traversed in going from wing to wing, and facilitating the administration of affairs.

This allows covered passage-ways between all parts of the hospital without interfering with light or ventilation, and will afford the means for cozy vine-covered walks and protected flower-gardens for the exercising grounds of this class of patients.

The remaining two-thirds of the whole number of patients destined to be cared for in the establishment, should be accommodated in houses of smaller capacity built for the purpose on the grounds of the institution and within its enclosures.

These houses should be of sufficient capacity to accommodate twelve to fifteen persons each, and should be of two stories in height, having all day accommodations in the first story, and all sleeping, and bathing, and dressing accommodations in the second story. The store-rooms should be placed in the basement, which should be high and dry. These houses should be plainly and substantially built of brick or stone, plainly furnished, and should be models of neatness and convenience. The cooking apparatus of each of these houses should be worthy of Yankee ingenuity and skill, and should be made to warm and ventilate all the rooms of the houses during the cold season of the year as well as to warm all the water for the bathing purposes of the family.

These houses may be placed at such distances from each other as the extent of the estate will permit; care being taken only to select sunny and cheerful spots in protected situations. Those occupied by the males should be at a little distance and somewhat different in character and convenience from those occupied by females, and should be separated from them by a drive-way and such other distinctions as may be convenient. There should be no interior divisions of the estate except at the hospital proper and such as are needed for the protection of growing crops.

Each house should have its garden for fruits, flowers and vegetables, which should be cultivated by members of the family. Each garden should have its own walks, which should unite and harmonize with the general walk and drive through the whole grounds.

Naturally enough the houses on the side near the farm-house and stables should be occupied by the farm laborers.

Those near the shops and engine-house would best accommodate the mechanics, gardeners and chore-men.

On the other side the houses near the laundry and bakery will accommodate the laboring women, housekeepers, seamstresses, &c.

At a little distance from these the houses will be occupied by women, wives and daughters not accustomed to severe labor, who will pass their time in light employments and in the gardens and grounds of the institution.

And still further remote, almost outside the gates, should be one for each sex of still better character, partially secluded from all others, which should be furnished for and occupied by convalescents during the few weeks or months just previous to leaving the control of the institution for the duties of active life.

At or near the central group, or hospital proper, should be placed the steam-works for heating and ventilating, pumping, &c.; the laundry, bakery, a model bathing-house and the general store-house, from which all supplies should be issued by an order from the proper office, and a strict account kept with every family receiving such supplies.

Here, too, should be the gymnasium, recreation rooms, lecture rooms, general library and chapel.

Here also should be a system of experimental shops for such persons as cannot be expected to engage in useful labor, but who would while away much of their time in rational activity, and thus promote a speedy restoration to sound health of body and mind.

Could this plan be adopted and carried out, a wide step would be taken in advance of any existing arrangement for the care and recovery of the insane. In doing so a departure would of course be made from the general style and character of hospital buildings.

The question may be fairly asked, How can these results be attained? The legislature has granted permission to purchase, occupy and improve a suitable tract of land, and on it quietly and energetically commence building, according to the proposed plans, and eventually, as opportunity occurs, put the lands at present owned by the hospital into the market, occupying the same until the new structures are erected, the legislature in the meantime giving to the Trustees, with suitable checks and guarantees; the credit of the State to the extent of one hundred thousand dollars.

My estimate of the value of the lands was one year ago as follows: The lot upon which the hospital now stands contains twelve and sixtenths acres, and at thirty cents per foot will amount to \$164,656.80.

The lot on which the barns are located contains four and twenty-

five-hundredths acres, and at thirty cents per foot will amount to \$55,539.

Ten acres bordering upon Mulberry and Central Streets, at twenty cents per foot, will amount to \$87,120.

Ten acres bordering upon a continuation of Laurel and Wilmot Streets, at ten cents per foot, will amount to \$43,560.

Ten acres on Rattlesnake Hill, so called, at five cents per foot, will amount to \$21,780.

Forty acres on Chandler Hill, between Belmont Street and a continuation of Laurel Street, should be offered to the city of Worcester for the purpose of a park, and at two thousand dollars per acre will amount to \$80,000.

The remaining seventeen acres lying between Shrewsbury Street and the continuation of Laurel Street, at one thousand dollars per acre, will amount to \$17,000, making a total of \$469,655.80.

You will notice that this calculation is based upon a value per foot considerably less than the several lots are appraised by competent judges.

You must remember that the value of land in this vicinity is constantly increasing, and by the time new structures shall be completed will be very considerably augmented. [See plan of lands, p. 106.]

The legislative Committee on Charitable Institutions not being satisfied with this appraisal, requested Mr. Ely, a real estate agent of Worcester, to make an appraisal and report to them, which he did, as follows:—

Worcester, Mass., January 25, 1870.

Committee on Charitable Institutions.

GENTLEMEN,—Agreeably to request I herewith submit to you my estimate of the value of land now occupied by the State Lunatic Hospital in this city, or what I think can be realized for the same, within three years, by proper management in the sale thereof:—

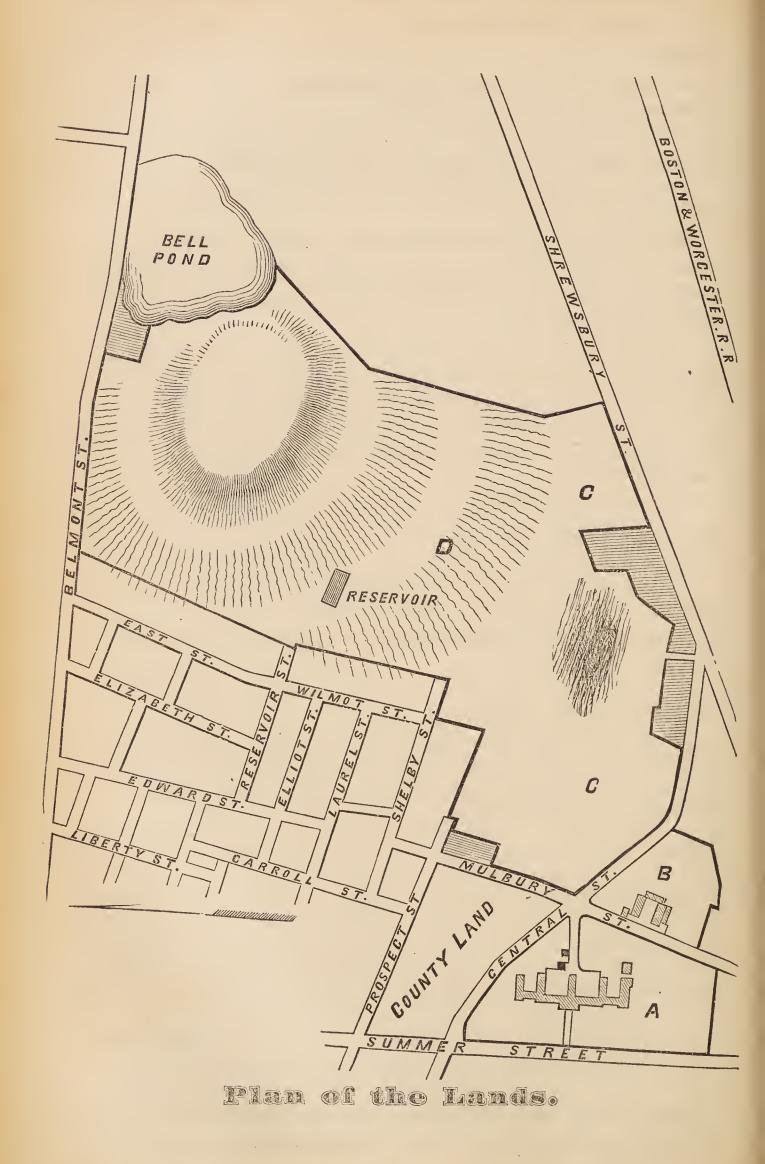

Hospital lot,	12.6 a	cres at	60 cents	per foot,	\$329,303	60
Barn lot,	4.5	66 66	40 "	66	78,408	00
Mulberry & Central St. lots,	10	"	25 "	"	108,900	00
Laurel & Wilmot St. lots,	10	66 66	15 "	66 .	65,340	00
Rattlesnake Hill,	10	"	5 "	66	21,780	00
Chandler Hill,	40	66 66	\$2,000 p	er acre,	80,000	00
Shrewsbury Street,	17	"	1,000 "	"	17,000	00

\$700,731 60

Respectfully,

L. A. ELY.

This appraisal being higher than was anticipated, some members of the Finance Committee of the legislature desired another esti-

mate made by two or more persons. The services of Messrs. Emory Banister and David S. Messenger, well known public appraisers, and old residents of Worcester, were obtained, and the following is their statement:—

Gentlemen,—The following is the result of the appraisal made by Emory Banister and David S. Messenger of the property of the Worcester Lunatic Hospital, February 22, 1870:—

Hospital lot, .	•	548,	656	feet	$\mathbf{a}\mathbf{t}$	30	cents	per f	oot,	\$164,656	80
Barn lot,	•	185,	130	44	44	25	44	- 46		46,282	50
Mulberry St. lots,	•	185,	130	44	66	25	64	44		46,282	50
E. Central St. lot,	•	592,	417	66	44	25	44	66		47,393	36
Lot No. 6, $12\frac{1}{4}$ acres,	•	•	•	•		•	•		•	12,250	00
Lot No. 7, 12½ "	•	•	•	•		•	٠	•	•	6,250	00
Lot No. 8, Chandler	Hill,	$36\frac{6}{10}$	acre	es, .		•	•	•	•	36,600	00
Lot No. 9, Belmont S	št.,	$11\frac{1}{4}$	66	•		•	•	•	•	22,500	00
										\$382,215	16
All other property (n	ot pe	ersona	1),	•		•	•	•	•	50,500	00
Total, .	•	•	•	•		•	•	•	•	\$432,715	16
(Signed,)						Emory Banister. D. S. Messenger.					

From these several appraisals it will be seen that with judicious management a sum not much short of \$500,000 may be realized from the sale of the present site. It is to be hoped that the new hospital, when complete, with accommodations for four hundred and fifty patients, will not have cost much more than that sum. Indeed, it is fairly believed that, with prudent use of the means within the control of the Trustees, the whole may be accomplished without involving the Commonwealth in any expense beyond the use of certain sums of money until a portion of the lands have been disposed of.

As no lots have yet been sold, and as the \$100,000, so generously loaned by the legislature, have been expended in the purchase of the new site, and your Board have assumed a debt of about \$10,000 in order to complete the purchase, giving your notes for the same, and as at present we have no means for the development of the newly purchased site, it is earnestly desired that the legislature would grant a further loan of about \$30,000, with which to cancel your obligations to the former owners of the lands, and also to commence the work of grading and building farm buildings, so that the estate may be fully and usefully occupied.

108 LUNATIC HOSPITAL AT WORCESTER. [Oct.'70.

It is fairly believed that no further loan from the State will be needed, as in all probability certain portions of the land now occupied will be disposed of in the course of the present year, affording at least sufficient means for the prosecution of the work.

With such assistance as is now asked, the work will be faithfully and scrupulously pursued, and every honest effort will be made to insure its ultimate success.

MERRICK BEMIS.

Worcester Lunatic Hospital, Worcester, Mass., October 1, 1870.
